PROFESSIONAL SUMMARY

Systems administration and automation professional with a Computer Science background and hands-on experience building practical tools, self-hosted infrastructure, cloud automation, and community-focused software. Uses AI for prototyping, configuration, troubleshooting, log analysis, and documentation while personally validating system behavior, security boundaries, and real-world results.

TECHNICAL SKILLS

Programming & Automation Python, JavaScript/TypeScript, SQL, YAML, Bash
Systems & Platforms Linux/Ubuntu, Windows, Docker, Docker Compose, Home Assistant, Git, KVM/QEMU
Cloud & Infrastructure AWS, Azure DevOps, Terraform, CI/CD, networking, APIs (REST, GraphQL), MQTT

SELECTED PROJECTS

Ukrainian Consulate Appointment Monitor

Python | *GraphQL* | *SMTP* | *Telegram* | *JSON*

- Built a configurable Python tool that monitors Ukrainian consular appointment calendars, detects new openings, tracks previously discovered slots to prevent duplicate alerts, and sends notifications by email or Telegram.
- Shared the tool with friends and acquaintances, helping them notice appointment openings without repeatedly refreshing booking pages.

Home Assistant & Linux Homelab

Home Assistant | *Docker Compose* | *KVM/QEMU* | *MQTT*

- Built and maintain a centralized home automation platform that replaces multiple vendor-specific applications and consolidates device control, monitoring, and automation.
- Integrated devices and services across Zigbee, Bluetooth/BLE, Wi-Fi, cloud APIs, MQTT, ESPHome, and mobile integrations. The current Home Assistant environment includes 261 registered devices, 1,716 entities, and 25 automations.
- Built practical workflows for lighting, appliances, smart-scale processing, vehicle routines, battery alerts, and backups. Used AI to draft YAML, analyze logs, and troubleshoot integrations while manually validating entity states, automation traces, security decisions, and real-device behavior.

LoL Universal Tool

Electron | *React* | *TypeScript* | *Vite* | *Vitest*

- Built a Windows companion application for a small League of Legends Discord group and tested it during real matches.
- Integrated League Client and Live Client Data APIs to provide in-game timers, draft automation, role-based draft profiles, post-match reporting, and synchronized gameplay information.
- Iterated on timing, client-state detection, and user controls through repeated real-game testing and use by the Discord group.

Cloud Automation Projects

AWS | *Terraform* | *Azure DevOps* | *CI/CD*

- Built a Terraform-based AWS EC2 scheduling workflow with EventBridge, Lambda, and IAM; also built and tested Azure DevOps CI/CD workflows for automated application builds and deployments.

EDUCATION

A.S. in Computer Science **2018 - 2021**
Bunker Hill Community College | Boston, MA

Bachelor's Degree in Law **2014 - 2018**
National Academy of Internal Affairs | Kyiv, Ukraine

CERTIFICATIONS & TRAINING

AWS Certified Solutions Architect - Associate | AWS Certified Cloud Practitioner | Claude 101 | AI Fluency

LANGUAGES

English - Advanced | Ukrainian - Native | Russian - Native
